Hi

This is Satya Mallick from LearnOpenCV.com

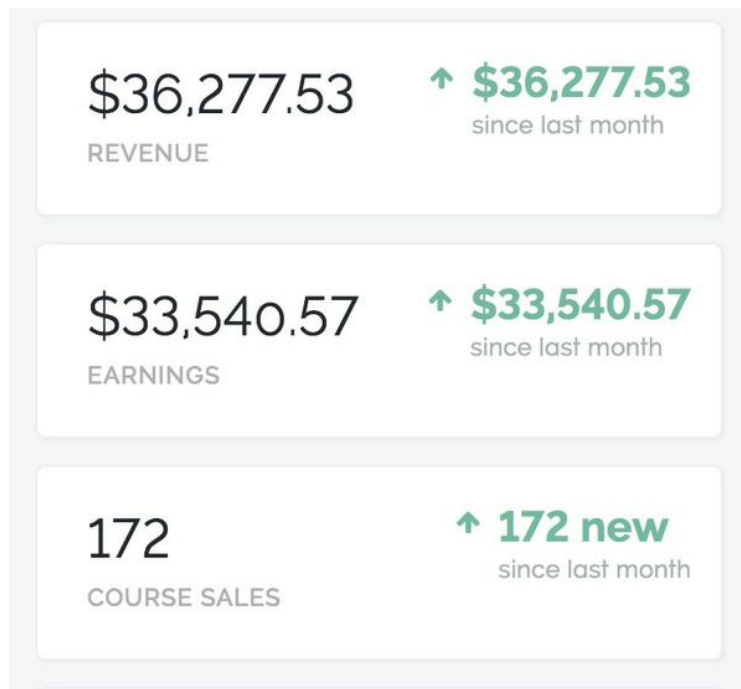

Wow! I must be dreaming. People have responded to the course way beyond my expectation. Before I share some juicy details, I want to thank readers who have registered for the course. For those who have not, the enrollment is open till **April 12**

<http://courses.learnopencv.com/>

How is the course enrollment coming along?

The response has been massive! Here is a screenshot of my dashboard.

People from about **about 50 countries** bought the course and almost **50%** of them were from developing countries like **India, China, Vietnam** and **Brazil**. When converted to their local currency, the course is expensive and yet people are making an investment in their future growth and knowledge bank.

Bonus

Because of this initial success we have had in raising money for the course, we are going to invest even more on the course. In addition to supporting all three operating systems, we will support a **Virtual Machine** which will come loaded with all the packages you need for the course.

In addition, we are going to add some more facial filters like the **Aging Filter** that will make you look old!

I am very excited about this course. I hope you join the course and help it make a huge success.

Setup

Salya
