Hi

This is Satya Mallick from [LearnOpenCV.com](http://LearnOpenCV.com)

The wait is over, folks! "**Computer Vision for Faces**" is now open for enrollment!

<http://courses.learnopencv.com/>

If you **enroll today**, you will receive a **10% discount**. Time is ticking away.

**AI is like electricity**; it will disrupt one industry after the other. You want to ride this wave to a better career. You want to build fun applications using Computer Vision. You have the itch that makes creative people want to try new things; explore new areas. You know working in the field of Computer Vision and AI will be very exciting, but you can use a little help from someone who is not as intimidating as a college Professor but is like a friend who has traveled the path before. I will be honored to be the teacher who will guide you into this exciting new area.

### **Is this course right for you?**

Ask yourself the following questions

- Do you dream of a career in AI, Computer Vision, and Machine Learning?
- Are you an entrepreneur who wants to build exciting products?
- Are you a student who is unsure which career path to take, but are keen to explore AI?
- Are you a hobbyist who loves building things?

If the answer to any of the above questions is a YES, this is the right course for you.

**"But I am not good at Math. Do I need to know Linear Algebra, Probability, and Statistics or [insert your favorite Math monster here]."**

I have designed this course for programmers and engineers. You need to know C++ or Python. We will learn enough theory to understand the algorithms without going into tedious mathematical details. If you have read some of my posts, you know my style. We are engineers; we build things! Not just theorize about them.

**"But I don't have the time to take this course right now."**

I would suggest, buy the course now and lock in the introductory price. Once enrolled, you have lifetime access to the course. You can work on it at your own pace.

I hope to see you in the course. This is an excellent time to invest in your AI education. **It is always a good time to invest in yourself.**

If you have any questions, please feel free to ask by replying to this email.

Thanks!

**Satya**
