

This is Satya Mallick from [LearnOpenCV.com](https://www.learnopencv.com).

Thank you so much for enrolling in the course. So far **215 students have enrolled**.
Woohoo! This is way beyond my expectation!

I need your help to hit our next target of 300!

Refer a friend

During my lifetime I have taken many courses and prepared for many tests. It was always more fun when some of my friends were taking the same course. We could help each other out and push each other to do better.

If you have a friend who would like to join the course, please send them this coupon code they can use at checkout to receive a 10% discount.

FRIEND

After your friend registers with the above coupon code, please send me an email with his / her name and email address. After I confirm their registration, **I will refund you \$25 for every student you refer** up to a maximum of your full course registration fee.

Bonus Material

Because of the huge interest this course has generated, we have decided to add the following bonus content

1. **Virtual Machine:** We will provide a downloadable VM that will be preloaded with all libraries you need. This will save you a lot of hassle in case you do not want to configure and install libraries on your local machine.

2. More Snapchat Filters: We will add a few more Snapchat like filters. E.g. Aging simulator!

A team of 5

The more success we have with this course in terms of enrollments, the more we are going to invest in it. I have a team of three engineers working on the course, and today I am pleased to announce that two interns from Indian Institute of Technology (read MIT of India) will joining the team. They will not only help us write code, they will also help us test the course because they too are beginners in computer vision and machine learning.

That is all I have to share today. Thank you so much for your support.

Satya
