Hi

This is Satya Mallick from [LearnOpenCV.com](http://LearnOpenCV.com)

First, thank you all for the response to my last email about how I got started in Deep Learning. I have not shared that story on my blog because it is a bit embarrassing to tell the whole world that I ran for help to a friend when I was starting out. I shared it with you because it helps to know that everybody struggles and it takes real effort to push through difficult times.

We sometimes think that we need to accumulate a lot of knowledge before we can apply that knowledge. Not true! I have enormous respect for people who maximize the return on their current level of knowledge. Today I am presenting three stories of readers of this blog, who have taken the initiative to start building as they are learning.

You will learn about Marc who did not know what a "for loop" was just over a year back and has built a typing tool for paralysis patients.

And you will see a nice demo of a virtual keyboard by Stephen. He has also generously shared code.

Finally, we will meet Roi who had no experience in Computer Vision but learned everything needed to efficiently port Dlib's facial landmark detector to iOS. He ended up selling the code to someone you know

:).

Without further ado, let's dive into these inspiring stories.

## **Course Update**

I am spending about 80% of my time on the course now. In addition, two computer vision engineers from my team are working full time on it. People expect high quality work from us and we are working hard to create something awesome!

Sometime next week the course will be open for a pre-sale enrollment for 7 days at a discounted price because people who enroll now are putting their faith in us. Thank you!

At the time of enrollment you will know the entire curriculum. However, the course will launch 10 weeks after the enrollment period. We will also provide a 30 day money back guarantee!

I noticed that my previous email about the course survey went to the spam folder for a lot of people. If you are interested in the course, please whitelist this email address.

Thanks a bunch and stay tuned.

**Satya**
